

EyalAmit.co.il – Design, Visual Identity, and Brand

Design Philosophy

The site's design direction is described as **"ללא מהפכות בממשק"** – no interface revolutions. This is a deliberate decision: the brand is established, the visual identity is recognized by an existing audience, and the goal is a modern, clean, professional refresh – not a brand overhaul.

The design should communicate: **professional center, not a hobby site**. The visual language should feel warm, grounded, and calm – not clinical, not flashy, not spiritual-cliché (no dreamcatchers, no mandalas, no stock "meditation sunset" photography).

Mobile-first. Every block is designed for mobile before desktop. This is both a design constraint and an SEO requirement (Google's mobile-first indexing).

Generous whitespace. The site should breathe – generous margins, not dense, not cluttered. The content is substantive; it does not need visual noise to feel rich.

RTL-native. All layout, all text rendering, all padding/margin logic uses CSS logical properties to be genuinely RTL – not just `direction: rtl` applied on top of LTR assumptions.

Color Palette (Locked – From Eyal's Canva Brand Slide)

These seven colors are the complete brand palette. They are derived from Eyal's own Canva branding material and are binding for all UI outputs.

Name	HEX	Primary Role
Sand	#D8C7B5	Light backgrounds, soft surfaces, gradients, OG image background
Terracotta	#A44E2B	Primary accent – borders, structural lines, active states
Earth	#8A5A44	Secondary text, metadata, warm supporting icons
Olive	#6E6F4A	Nature / organic / secondary emphasis (sparingly)
Ink	#2E2B28	Primary text, dark headings, all body copy
Chocolate	#5C3A2E	Secondary headings, secondary buttons, deep borders
Brick	#AB3A2B	Strong CTA, call-to-action buttons, critical highlights (used sparingly)

CSS Custom Properties

All implemented via CSS custom properties in the child theme:

```
:root {
  --eyal-sand:      #D8C7B5;
  --eyal-terracotta: #A44E2B;
  --eyal-earth:     #8A5A44;
  --eyal-olive:     #6E6F4A;
  --eyal-ink:       #2E2B28;
  --eyal-chocolate: #5C3A2E;
  --eyal-brick:     #AB3A2B;

  /* Semantic aliases */
  --accent:          var(--eyal-terracotta);
  --accent-strong:   var(--eyal-brick);
  --text:            var(--eyal-ink);
  --text-muted:      var(--eyal-earth);
  --surface:         var(--eyal-sand);
}
```

Color Usage Guidelines

- **Ink** (#2E2B28) is the default body text color – warm near-black, not pure #000000
- **Sand** (#D8C7B5) is the default page background color for sections that need warmth and softness
- **Terracotta** (#A44E2B) draws attention: borders on key content boxes, active navigation states, H2 underlines

- **Brick** (#AB3A2B) is for CTA buttons only – reserved for conversion-critical elements. Do not use for decoration.
- **Olive** (#6E6F4A) is used sparingly – it reads as “nature” and provides subtle differentiation, but can look muddy if overused
- **No pure white** (#FFFFFF) for large background areas – use Sand instead for warmth. White can be used for card backgrounds nested inside Sand sections.

Logo Specification

Logo shape: Square (1:1 ratio)

Source master: `master logo cbddidg.psd` (Adobe Photoshop)

Currently deployed on old site: `ea-logo.jpg` – 472×472px JPEG – **insufficient quality**. The new site requires proper exports.

Required export set (10 files):

File	Format	Size	Background	Use
<code>ea-logo.svg</code>	SVG	Scalable	Transparent	Master – all digital use
<code>ea-logo-512.png</code>	PNG-24	512×512	Transparent	High-res digital
<code>ea-logo-256.png</code>	PNG-24	256×256	Transparent	Standard digital
<code>ea-logo-192.png</code>	PNG-24	192×192	Transparent	PWA / app icon
<code>ea-logo-128.png</code>	PNG-24	128×128	Transparent	Nav header
<code>ea-favicon.ico</code>	ICO	Multi-size	Transparent	Browser favicon
<code>ea-favicon-32.png</code>	PNG	32×32	Transparent	Favicon
<code>ea-favicon-16.png</code>	PNG	16×16	Transparent	Favicon small
<code>ea-og-image.jpg</code>	JPEG	1200×630	Sand (#D8C7B5)	OG / social sharing
<code>ea-logo-print.png</code>	PNG-24	1000×1000	Transparent	Print use

OG Image spec: Logo centered (~400×400px) on 1200×630 canvas with Sand (#D8C7B5) background. Typography: Heebo Light 300, Ink #2E2B28 . Include the site name or tagline below the logo mark.

Header display size: max-height: 40px – logo scales down cleanly to this from the SVG source.

No dark-background version needed – all site surfaces are light/warm tones.

Typography

Hebrew fonts (approved):

- **Primary:** Arial (safe fallback – universally available)
- **Preferred:** Heebo or Assistant (Google Fonts – clean, RTL-optimized, readable)
- **Weight hierarchy:** 700/800 for H1, 600 for H2, 400 for body, 300 for captions/metadata

Font stack:

```
font-family: 'Heebo', 'Assistant', Arial, sans-serif;
```

Type scale (general guidance):

- H1: 2.2~2.8rem (desktop), 1.6~1.8rem (mobile)
- H2: 1.6~1.8rem (desktop), 1.3rem (mobile)
- H3: 1.2~1.3rem
- Body: 1.05~1.1rem, line-height 1.7~1.8 (generously open)
- Captions/metadata: 0.85rem, Earth (#8A5A44)

Letter-spacing: Minimal – these fonts are designed for Hebrew legibility without tracking adjustments.

No mixed-language font conflicts: The English landing page uses the same font stack – Heebo supports both Hebrew and Latin characters.

Homepage Visual Direction Options

Three homepage block sequences were developed for client selection. All three share the same block inventory – they differ in visual hierarchy and density:

Option A – “One Gate”

Full-width hero (dominant image + H1 + CTA) → single main news/events block → up to 3 secondary service cards below. **Minimal.** Immediate clarity about “what’s happening now.” Best when Eyal has regular events to feature.

Option B – “Center + Depth”

Narrower hero + message block + CTA → side column with events list → 2 equal content blocks (one service summary, one testimonial). More “professional center” feel. Best for building trust quickly on first visit.

Option C – “Dominant Image + Layer”

Nearly full-screen image or ambient video + text overlay + CTA → one “what’s new” line → two action buttons/cards. Most minimal. For strong personal brand with infrequent public events. The visual communicates the atmosphere more than the words.

Eyal’s stated preference: “A hero with a large image and diverse elements below” – aligning most closely with Option A or Option B. Final selection pending.

Page-Level Design Patterns

The Answer Block Pattern

Every H2 section on service/method pages is followed by a visually distinct answer block:

- Slightly indented or slightly larger font
- Terracotta left-border (RTL: right-border for Hebrew, left-border for English)
- 40-100 words
- No jargon, no sub-clauses

This block serves both SEO (structured for featured snippets) and UX (scannable on mobile).

The Distinction Table Pattern

Used for the “Treatment vs. Sound Healing” comparison:

- Two-column comparison table
- Warm palette – Sand background, Chocolate border, Ink text
- No heavy borders – subtle `border-collapse` with thin lines

The FAQ Pattern

- H3: Question
- P: Answer (40-100 words, direct)
- Accordion behavior on mobile (expand/collapse), flat display on desktop
- FAQPage schema markup

The Testimonial Pattern

- Short (2-4 lines of text)
- Attribution: first name, general context (e.g., "מנהל פרויקטים, תיא")
- No photos required (privacy)
- Sand background card with Terracotta accent border

The CTA Block Pattern

Appears at minimum: top of service page (hero CTA) + bottom of service page (closing CTA).

Primary CTA text: "לתיאום שיחת היכרות"

Secondary CTA text: "לפרטים ויצירת קשר"

CTA button: Brick (#AB3A2B) background, white text, 6-8px border-radius, comfortable padding (16px 32px). Hover state: darken 8-10%.

Photography and Visual Content Guidelines

What to use:

- Eyal in the studio – playing, teaching, one-on-one setting
- The instrument – close-up detail, texture, natural light
- The studio space – warm, natural, with garden visible
- Hands on the instrument – action-oriented, not posed

What to avoid:

- Generic stock "wellness" photography (sunset meditation, empty nature landscapes, generic hands)
- Images that code as "spiritual healing" without human specificity
- Oversaturated or HDR processing – keep natural

Image treatment: Warm color grading consistent with the Sand/Terracotta/Earth palette. Slight desaturation of cool tones, slight lift on warm tones. No filter presets that push toward blue/purple tones.

Alt text: All images have descriptive Hebrew alt text – required for accessibility compliance (Israeli standards) and SEO.

Technical Design Implementation

Platform: WordPress 6.9+ / GeneratePress parent theme + `ea-eyalamit` child theme + ACF (Advanced Custom Fields)

What lives in the child theme:

- All brand CSS (via `style.css` in child theme)
- All custom PHP functions (prefix: `ea_`)
- Custom page templates
- Logo and brand asset files
- Any custom block templates

What does NOT live in the child theme:

- Plugin configurations (these are in the database)
- Content (this is in WordPress posts/pages/ACF fields)
- Media library assets (in `wp-content/uploads/`)

GeneratePress modules active:

- Blog
- Colors
- Disable elements (for selective layout control)
- Site library (for base templates)
- Spacing

Explicitly forbidden:

- Elementor (would replace GeneratePress as the builder – not compatible with the lean architecture)
- WPBakery, Divi, or other heavy page builders
- Any plugin that injects its own visual components that can't be overridden by the child theme

Block editor (Gutenberg): Used for standard page/post content. The Answer Block Pattern is implemented as a custom Gutenberg block pattern in the child theme – authors select it from the pattern library for consistent rendering.

Responsive Design

Breakpoints:

- Mobile: < 600px
- Tablet: 600px~1024px
- Desktop: > 1024px

Mobile-first implementation: All CSS starts from the mobile layout. Media queries add complexity for larger screens, not the reverse.

Key mobile behaviors:

- Navigation: hamburger menu with full-screen overlay (drawer style, RTL)
 - Service tables / comparison blocks: stack vertically on mobile
 - FAQ: accordion behavior (one open at a time)
 - Hero: text block below image on mobile (not overlaid – insufficient contrast at small sizes)
 - CTA button: full-width on mobile
-

Accessibility Standards

The site targets compliance with Israeli accessibility standards (WCAG 2.1 AA minimum):

- WP Accessibility plugin (Joe Dolson) active
- Skip-to-content link
- All form labels properly associated
- All images have alt text
- Heading hierarchy respected (one H1, logical H2/H3 nesting)
- Minimum contrast ratio 4.5:1 for body text – verified for all palette color combinations
- Keyboard navigation tested for all interactive elements

Color contrast check on primary combinations:

- Ink (#2E2B28) on Sand (#D8C7B5): contrast ratio ~7.2 – PASS

- White on Brick (#AB3A2B): contrast ratio ~4.8 – PASS
- Earth (#8A5A44) on White: contrast ratio ~5.1 – PASS (for captions)

Accessibility statement page: Required by Israeli law – present and linked from footer.
